AB - J01230659 Compsn. comprises polyvinyl alcohol and divalent metal salt

as main component except for water. The polyvinyl alcohol has viscosity average deg. of polymerisation of at least 500 and deg. of saponification of at least 80 mol %. Content of polyvinyl alcohol in the hydrogel is 5-80 wt. %. The divalent metal salt is zinc chloride, calcium chloride, strontium chloride, palladium chloride, barium chloride, bismuth chloride, beryllium chloride, magnesium chloride, manganese chloride or nickel chloride. Content of the metal chloride in the hydrogel is 2-90 wt. %.

- USE/ADVANTAGE - Compsn. is used for insulating material, skin absorbent medicine, living electrode gel, carrier for enzyme or bacterium, insect repellent, insecticide, germicide, agro chemical, slow release carrier for perfume, deodorant, invalid mat, dryer, etc. because it does not irritate living organisms and does not reduce nor deteriorate the activity of biogenic substances.(0/0)
